#### 使用说明

一二在同一个工程中, 三单独一个工程

#### 第一:

服务注册临时节点路径:/base/rpc\_server/ip:port

```
zdy_rpc ~/code/zdy_rpc
                                                                            });
   ▶ 🖿 .idea
     zdy_rpc_common
                                                                       //2.初始化netty客户端
      ▼ Isrc
                                                                       The section than dier = new UserClientHand
        ▼ I main
           ▼ ijava
                                                                            EventLoopGroup group = new NioEventLoop
              ▼ 🖿 com.lagou
                 ▼ t register
                                                                            Bootstrap bootstrap = new Bootstrap();

                                                                            for (Map.Entry<String,ServerProxyEntity
    ServerProxyEntity serverProxyEntity</pre>
```

## 第二:

### 第三:

设置zk数据库配置:

#### set /base/datasource

'jdbc.driver=com.mysql.jdbc.Driver;jdbc.url=jdbc:mysql://localhost:3306/bank;jdbc.username=roo t;jdbc.password=root123456'

### 访问路径:

默认: <a href="http://localhost:8080/account/queryAll">http://localhost:8080/account/queryAll</a>, 可根据需要自己通过启动参数-Dserver.port=8888更改

# 工程结构说明:
